Kouach M., Kasinsky H.E., Chiva M.;
"Chromatin organization during spermiogenesis in Octopus vulgaris. II:
                                                                                                                                                                                         DNA-interacting proteins.";
Mol. Reprod. Dev. 68:232-239(2004).
-!- FUNCTION: Protamines substitute for histones in the chromatin of sperm during the haploid phase of spermatogenesis. They compact sperm UNA into a highly condensed, stable and inactive complex.
-!- SUBCELLULAR LOCATION: Nuclear.
-!- TISSUE SPECIFICITY: Testis.
-!- MASS SPECIFICITY: Testis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

"Chromatin organization during spermiogenesis in Octopus vulgaris. II: DNA-interacting protenins."

Mol. Reprod. Dev. 68:232-239(2004).

-! FUNCTION: Protenines substitute for histones in the chromatin of sperm during the haploid phase of spermatogenesis. They compact sperm during the haploid phase of spermatogenesis. They compact sperm during the haploid phase of stable and inactive complex.

-! SUBCELLULAR LOCATION: Nuclear.

-! TISSUE SPECIFICITY: Testis.

-! MASS SPECIFICITY: Restis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sperm protemine P5 (Po5).

"Extraction, purification and characterization of the sperm protamines of the dog-fish Scyllorhinus caniculus ";
Biochim. Biophys. Acta 748.93-98(1983).
-: FUNCTION: Protamines substitute for histones in the chromatin of sperm during the haploid phase of spermatogenesis. They compact sperm during the haploid phase of stable and inactive complex.
-: SUBCELLUAR LOCATION: Nuclear.
-: TISSUE SPECIFICITY: Testis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDLINE=96394458; PubMed=8798564; DOI=10.1074/jbc.271.38.23547; Hunt J.G., Kasinsky H.E., Elsey R.M., Wright C.L., Rice P., Bell J.E., Sharp D.J., Kiss A.J., Hunt D.F., Arnott D.P., Russ M.M., Shabanowitz J., Ausio J.; Proctamines of reptiles: "Proctamines of reptiles:", J. Hypothetical protein B1156H12.5.
Name=B1156H12.5;
Orza sativa (japonica cultivar-group).
Bukaryota, Viridiplantae; Streptophyta; Embryophyta; Tracheophyta; Spermatophyta; Magnoliophyta; Liliopsida; Poales; Poaceae;
Ehrhartoideae; Oryzeae; Oryzea.
                                                                                                                                                                                                                                                                                                                              01-MAR-2004 (TrEMBLrel. 26, Created)

Ribosomal protein S18, Cysoolic (Fragment).
Xenopus laevis (African clawed frog).
Eukaryota, Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;
Amphibia; Batrachia; Anura; Mesobatrachia; Pipoidea; Pipidae;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Grossberger D., Flajnik M., Marcuz A.;

"Ribosomal and chromosomal protein cDNA clones of Xenopus laevis thysosomal and chromosomal protein cDNA clones of Xenopus laevis thymus isolated with differential screening.";

Comp. Blochem. Physiol. 98:127-133(1991).

1. SIMILARITY: Belongs to the ribosomal protein S13P family. PIR. C61510, C61510.

Mol. Reprod. Dev. 68:232-239 (2004).

-!- FUNCTION: Protamines substitute for histones in the chromatin of sperm during the haloid phase of spermatogenesis. They compact sperm haloid the highly condensed, stable and inactive complex.

-!- FUNCTION: Octopus spermiogenesis is characterized by a double.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    28-FEB-2003 (Rel. 41, Created)

"Molecular phylogeny and evolution of marsupial proteamine P1 genes.";
Proc. R. Soc. Lond., B. Biol. Sci. 259:7-14(1995)
-!- FUNCTION: Protamines substitute for histones in the chromatin of sperm during the haploid phase of spermatogenesis. They compact sperm DNA into a highly condensed, stable and inactive complex.
-!- SUBCELLULAR LOCATION: Nuclear.
-!- TISSUE SPECIFICITY: Testis.

"Sequencing of the draft genome assembly of Azotobacter vinelandii
01-FEB-2005 (TrEMBLrel. 29, Last annotation update)
Hypothetical protein P0414E03.10.
Name=P0414E03.10;
Oryza sativa (japonica cultivar-group).
Oryza, y Uridiplantes, Streptophyta; Embryophyta; Tracheophyta; Spermatophyta; Magnoliophyta; Liliopsida; Poales; Poaceae; Ehrhartoideae; Oryzeae; Oryza.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Larimer F., Land M.; "Annotation of the draft genome assembly of Azotobacter vinelandii
